Chapter 305. Zoning

Article IV. Conditional Uses

§ 305-31. Standards for conditional uses.

A.

No application for a conditional use shall be approved by the Plan Commission or granted by the Village Board/Zoning Board of Appeals on appeal unless such Plan Commission and Board shall find that the following conditions are present:

1. The establishment, maintenance or operation of the conditional use will not be detrimental to or endanger the public health, safety, morals, comfort or general welfare.
2. The uses, values and enjoyment of other property in the neighborhood for purposes already permitted shall be in no foreseeable manner substantially impaired or diminished by the establishment, maintenance or operation of the conditional use, and the proposed use is compatible with the use of adjacent land.
3. The establishment of the conditional use will not impede the normal and orderly development and improvement of the surrounding property for uses permitted in the district.
4. Adequate utilities, access roads, drainage and other necessary site improvements have been or are being provided.
5. Adequate measures have been or will be taken to provide ingress and egress so designed as to minimize traffic congestion in the public streets.
6. The conditional use shall, except for yard requirements, conform to all applicable regulations of the district in which it is located.
7. The proposed use does not violate floodplain regulations governing the site.

B.

When applying the above standards to any new construction of a building or an addition to an existing building, the Plan Commission and Board shall bear in mind the statement of purpose for the zoning district such that the proposed building or addition at its location does not defeat the purposes and objective of the zoning district.

C.

In addition to passing upon a conditional use permit, the Plan Commission and Board shall also evaluate the effect of the proposed use upon:

1. The maintenance of safe and healthful conditions.
2. The prevention and control of water pollution, including sedimentation.
3. Existing topographic and drainage features and vegetative cover on the site.
4. The location of the site with respect to floodplains and floodways of rivers and streams.
5. The erosion potential of the site based upon degree and direction of slope, soil type and vegetative cover.
6. The location of the site with respect to existing or future access roads.
7. The need of the proposed use for a shoreland location.

8. Its compatibility with uses on adjacent land.
9. The amount of liquid wastes to be generated and the adequacy of the proposed disposal systems.
